

Perfect. We'll ignore all previous context and treat this as a **brand new project**.

I also want to change one thing from my earlier suggestion.

You should **not switch between different AI roles**. Instead, I'll act as your **Website Architect**, internally using the right expertise (marketing, UX, copywriting, SEO, UI, and development) at each stage. That way you only need to say "**Next**".

Our Website Development Process

Step	What We Create	You Store As
1	Website Strategy	01_Website_Strategy.md
2	Website Structure (Pages & Sections)	02_Sitemap.md
3	Website Content	03_Website_Content.md
4	UI/UX Design Specification	04_UI_Design.md
5	SEO Specification	05_SEO.md
6	HTML5 Website	Project Folder
7	Review & Improvements	07_Review.md

Every step builds on the previous one.

At the end you'll have

- Complete Website Documentation
- Modern UI
- Responsive HTML5
- SEO
- Fast Loading
- Production Ready

Rules

At every step I'll tell you

✓ What we're creating

✓ What you should save

✓ What I need from you for the next step

So you never have to wonder what's next.

STEP 1 — Website Strategy

Goal

Before writing a single line of HTML, we need absolute clarity on what the website is trying to achieve.

Think of this as the blueprint.

If this is wrong...

everything else becomes difficult.

Save this as

01_Website_Strategy.md

Website Strategy Template

Fill this in as much as you can. If you don't know an answer, write "**Decide Later**".

Section

Your Answer

Product Name

Tagline

One sentence describing your product

What problem does it solve?

Section

Your Answer

Who is the ideal customer?

What industries does it target?

What are the biggest pain points of these customers?

How does your product solve them?

Top 5 benefits

Why should customers trust you instead of competitors?

Main Call-To-Action

Secondary Call-To-Action

Free Trial / Demo / Contact?

Pricing available on website? (Yes/No)

Testimonials available?

Case studies available?

FAQ available?

Company information

Contact details

Social Media Links

What I Need From You

Only **one thing**:

Upload or paste your completed **Website Strategy**.

Don't worry about making it perfect.

My job in **Step 2** is to improve it.

What Happens in Step 2

Once you say **Next**, I'll use your strategy to create:

- Complete website sitemap
- Landing page sections
- Navigation
- User flow
- CTA placement
- Trust sections
- Page hierarchy

At the end of Step 2, you'll know **exactly what pages and sections** your website needs before we write any content.

We'll continue one step at a time until you have a complete, SEO-friendly HTML5 website.
